Uniform Mitigation Verification Inspection Form Maintain a copy of this form and any documentation provided with the insurance policy Inspection Date: Owner Information Owner Name: Windrush Bay Condominium Association Contact Person: Address: 401-404 Windrush Bay Dr Home Phone: City: Tarpon Springs Zip: 34689 Work Phone: County: Pinellas Cell Phone: Insurance Company: Policy #: Year of Home: 1976 # of Stories: 2 Email: NOTE: Any documentation used in validating the compliance or existence of each construction or mitigation attribute must accompany this form. At least one photograph must accompany this form to validate each attribute marked in questions 3 though 7. The insurer may ask additional questions regarding the mitigated feature(s) verified on this form. 1. Building Code: Was the structure built in compliance with the Florida Building Code (FBC 2001 or later) OR for homes located in the HVHZ (Miami-Dade or Broward counties), South Florida Building Code (SFBC-94)? ☐ A. Built in compliance with the FBC: Year Built _____. For homes built in 2002/2003 provide a permit application with a date after 3/1/2002: Building Permit Application Date (MM/DD/YYYY)___/ B. For the HVHZ Only: Built in compliance with the SFBC-94: Year Built provide a permit application with a date after 9/1/1994: Building Permit Application Date (MM/DD/YYYY) ___/ . For homes built in 1994, 1995, and 1996 C. Unknown or does not meet the requirements of Answer "A" or "B" 2. Roof Covering: Select all roof covering types in use. Provide the permit application date OR FBC/MDC Product Approval number OR Year of Original Installation/Replacement OR indicate that no information was available to verify compliance for each roof Permit Application Date No Information 2.1 Roof Covering Type: FBC or MDC Year of Original Installation or Product Approval # Replacement Compliance Asphalt/Fiberglass Shingle 1,18,22 2022 2 Concrete/Clay Tile ☐ 3 Metal 4 Built Up 5 Membrane ☐ 6 Other П A. All roof coverings listed above meet the FBC with a FBC or Miami-Dade Product Approval listing current at time of installation OR have a roofing permit application date on or after 3/1/02 OR the roof is original and built in 2004 or later. B. All roof coverings have a Miami-Dade Product Approval listing current at time of installation OR (for the HVHZ only) a roofing permit application after 9/1/1994 and before 3/1/2002 OR the roof is original and built in 1997 or later. C. One or more roof coverings do not meet the requirements of Answer "A" or "B". ☐ D. No roof coverings meet the requirements of Answer "A" or "B". 3. Roof Deck Attachment: What is the weakest form of roof deck attachment? ☐ A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" inches o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the field. -OR- Batten decking supporting wood shakes or wood shingles. -OR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift less than that required for Options B or C below. ☐ B. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of 24"inches o.c.) by 8d common nails spaced a maximum of 12" inches in the field.-OR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that is shown to have an equivalent or greater resistance 8d nails spaced a maximum of 12 inches in the field or has a mean uplift resistance of at least 103 psf. C. Plywood/OSB roof sheathing with a minimum thickness of 7/16"inch attached to the roof truss/rafter (spaced a maximum of

Attached to the wall top plate of the wall framing, or embedded in the bond beam, with less than a ½" gap from the blocking or truss/rafter and blocked no more than 1.5" of the truss/rafter, and free of visible severe B. Clips Metal connectors that do not wrap over the top of the truss/rafter, or
corrosion. B. Clips Metal connectors that do not wrap over the top of the truss/rafter, or
Metal connectors that do not wrap over the top of the truss/rafter, or
- the truss/rafter or
Vicial connectors suith
position requirements of C or D, but is secured with a minimum of 3 neith
C. Single wraps
Metal connectors consisting of a single strap that wraps over the top of the truss/rafter and is secured with a minimum of 2 nails on the front side and a minimum of 1 nail on the opposing side.
= 5. Bount W14ps
Metal Connectors consisting of 2 separate straps that are attached to the wall frame, or embedded in the bond beam, on either side of the truss/rafter where each strap wraps over the top of the truss/rafter and is secured with minimum of 2 nails on the front side, and a minimum of 1 nail on the opposing side, or
both sides, and is secured to the top plate with a minimum of three pails on each side.
☐ E. Structural Anchor bolts structurally connected or reinforced concrete roof. ☐ F. Other:
G. Unknown or unidentified
☐ H. No attic access
5. Roof Geometry: What is the roof shape? (Do not consider roofs of porches or carports that are attached only to the fascia or wall of the host structure over unenclosed space in the determination of roof perimeter or roof area for roof geometry classification).
A. Hip Roof Hip roof with no other roof shapes greater than 10% of the total roof system perimeter. Total length of non-hip features:
Teel Total root gygtom maning to
Roof off a building with 5 or more units where at least 000/ - Cal
less than 2:12. Roof area with slope less than 2:12 sq ft; Total roof area area sq ft Any roof that does not qualify as either (A) or (B) above.
 6. Secondary Water Resistance (SWR): (standard underlayments or hot-mopped felts do not qualify as an SWR) ☑ A. SWR (also called Sealed Roof Deck) Self-adhering polymer modified-bitumen roofing underlayment applied directly to the sheathing or foam adhesive SWR barrier (not foamed-on insulation) applied as a supplemental means to protect the ☐ B. No SWR. ☐ C. Unknown or undetermined.

This verification form is valid for up to five (5) years provided no material changes have been made to the structure or inaccuracies found on the form. OIR-B1-1802 (Rev. 01/12) Adopted by Rule 69O-170.0155

7. Opening Protection: What is the weakest form of wind borne debris protection installed on the structure? First, use the table to determine the weakest form of protection for each category of opening. Second, (a) check one answer below (A, B, C, N, or X) based upon the lowest protection level for ALL Glazed openings and (b) check the protection level for all Non-Glazed openings (.1,

(" in each row to identify all forms of protection in use for each pe. Check only one answer below (A thru X), based on the weakest of otection (lowest row) for any of the Glazed openings and indicate st form of protection (lowest row) for Non-Glazed openings. Applicable- there are no openings of this type on the structure fied cyclic pressure & large missile (9-lb for windows doors/4.5 lb for skylights) fied cyclic pressure & large missile (4-8 lb for windows doors/2 lb for skylights)	Windows or Entry Doors	Garage Doors	Skylights	Glass Block	Entry Doors	Garage Doors
